RC-40 Remote Control

The RC-40 combines two pairs of buttons (A&B and 1&2). It can be used to operate multiple wireless Jablotron devices. For example, one RC-40 can control your car alarm and your house alarm system or two independent partitions in a house alarm or up to 6 different devices when used with Jablotron UC receivers.

The RC-40 can send 6 instructions (A,B,1,2,A+B,1+2). It has a unique optional "keypad locking" feature (to prevent accidental activation or its unauthorized use). The RC-40 remote control is compatible with following Jablotron products:

- Wireless alarms: JA-6x (COMFORT, PROFI & MAESTRO)
- Universal receivers: UC-216, UC-222, UC-280 & UC-281
- Wireless wall switch: UC-230
- Wireless door bell & minialarm: UC-260
- Car alarms: CA-32x ACCENT and CA-10 REX
- Car central locking: CL-301 and CL-302

Locking the remote control keypad

To enable the locking feature unscrew and open the housing and remove the battery. Press the A button and while pressed reinsert the battery and keep holding the A button until the LED indicator flashes. Reassemble the remote control.

To lock keys, press simultaneously any two diagonal buttons (A+2 or B+1) until the LED indicator will flash. Now all buttons are locked. The LED indicator will rapidly blink if you press any button, but no signal will be transmitted.

To unlock the keys press any two diagonal buttons simultaneously (the same as locking).

To disable locking – perform enabling procedure (see above), disabling will be indicated by a flash of the LED.

Enrolling the RC-40 into a receiver

Read carefully the receiver's instructions. If a simultaneous pressing of A+B is requested to enroll the remote control (for example into a JA-6x control panel), you can use A+B and also 1+2. This way you can enroll the RC-40 as two different remote controls (right and left side buttons).

Battery replacement

When the battery is running low and the remote control working range gets shorter, replace it with a new one (type L1016).

Specifications

Power	*6V battery (L1016 type)*
Battery lifetime	*typically 1 year*
Frequency	*433.92 MHz*
Coding	*digital floating security code*
Keypad locking	*optional feature*
Can be operated according to ERC REC 70-03	
Complies with EN ETSI 300220, ETS 300683 and EN 50134.
