

JA-116E & JA-156E Touch Keypads Officially Launched!

Our new touch keypads, JA-116E and JA-156E, **will no longer be part of the beta program**. After a successful testing period and thanks to your valuable feedback, we have completed the final version of the product, which we are now releasing to the world.

We haven't made any radical changes, yet the new version incorporates several subtle enhancements, primarily based on your feedback. Your valuable comments and suggestions received during the beta program enabled us to implement a series of minor and major improvements.

What's different in the new version?

✔ Updated firmware

We've made numerous fixes and enhancements, addressing issues like random freezes and authentication errors, and improving overall performance based on your feedback and internal testing.

✔ Control without authorization

Section securing and PG control without authentication, based on keypad settings, are now available. This feature streamlines the user experience and provides more efficient access.

✔ Language pack improvements

Language pack improvements enhance font rendering and compatibility, ensuring a seamless experience across various languages.
